## 1. Introduction

### 1.1 Product Description

The Solis S6-EH1P-L Series is designed for residential hybrid systems, which can work with batteries to optimize self-consumption. The unit can operate in both off-grid and on-grid modes.

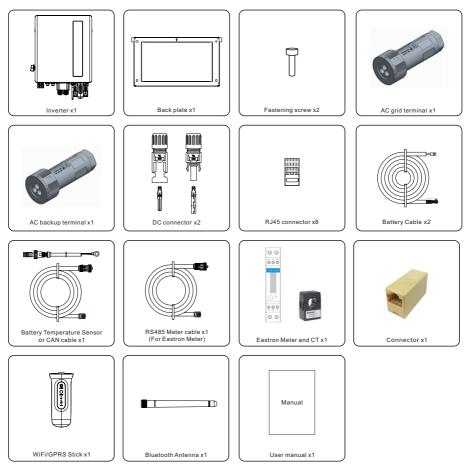

This manual covers the Solis S6-EH1P-L Series model listed below: S6-EH1P3K-L-EU/BE, S6-EH1P3.6K-L-EU/BE, S6-EH1P4.6K-L-EU/BE, S6-EH1P5K-L-EU/BE, S6-EH1P6K-L-EU

### 1.2 Packaging

Please ensure that the following items are included in the packaging with your machine:

If anything is missing, please contact your local Solis distributor.

### 2.1 Safety

The following types of safety instructions and general information appear in this document as

described below:

### DANGER:

"Danger" indicates a hazardous situation which if not avoided, will result in death or serious injury.

### WARNING:

"Warning" indicates a hazardous situation which if not avoided, could result in death or serious injury.

### CAUTION:

"Caution" indicates a hazardous situation which if not avoided, could result in minor or moderate injury.

### NOTE:

"Note" provides tips that are valuable for the optimal operation of your product.

### WARNING: Risk of fire

Despite careful construction, electrical devices can cause fires.

- Do not install the inverter in areas containing highly flammable materials or gases.
- Do not install the inverter in potentially explosive atmospheres.

### 2.2 General Safety Instructions

### WARNING:

Only devices in compliance with SELV (EN 69050) may be connected to the RS485 and USB interfaces.

### WARNING:

Please don't connect PV array positive (+) or negative (-) to ground, it could cause serious damage to the inverter.

### WARNING:

Electrical installations must be done in accordance with the local and national electrical safety standards.

## -. W

### WARNING:

Do not touch any inner live parts until 5 minutes after disconnection from the utility grid and the PV input.

#### WARNING:

To reduce the risk of fire, over-current protective devices (OCPD) are required for circuits connected to the inverter.

The DC OCPD shall be installed per local requirements. All photovoltaic source and output circuit conductors shall have isolators that comply with the NEC Article 690, Part II.

All Solis single phase inverters feature an integrated DC switch.

### CAUTION:

Risk of electric shock, do not remove cover. There is no user serviceable parts inside, refer servicing to qualified and accredited service technicians.

### CAUTION:

The PV array supplies a DC voltage when they are exposed to sunlight.

Ŷ	

### CAUTION:

Risk of electric shock from energy stored in capacitors of the Inverter, do not remove cover for 5 minutes after disconnecting all power sources (service technician only). Warranty may be voided if the cover is removed without authorization.

### **CAUTION:**

The surface temperature of the inverter can reach up to 75 $^{\circ}$ C (167 F). To avoid risk of burns, do not touch the surface of the inverter while it's operating. Inverter must be installed out of the reach of children.

### NOTE:

PV module used with inverter must have an IEC 61730 Class A rating.

### WARNING:

Operations below must be accomplished by licensed technician or Solis authorized person.

#### WARNING:

Operator must put on the technicians' gloves during the whole process in case of any electrical hazards.

#### WARNING:

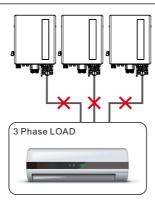

AC BACKUP Port of S6-EH1P-L Series is not allowed to connect to the grid.

#### WARNING:

The S6-EH1P-L Series does not support parallel in three phase operation on the AC-BACKUP port.

The inverter support parallel in single phase and support generator. (Only for 4.6/5/6kW)

#### WARNING:

Please refer to the specification of the battery before configuration.

### 2.3 Notice For Use

The inverter has been constructed according to the applicable safety and technical guidelines. Use the inverter in installations that meet the following specifications ONLY:

- 1. Permanent installation is required.
- 2. The electrical installation must meet all the applicable regulations and standards.
- 3. The inverter must be installed according to the instructions stated in this manual.
- 4. The inverter must be installed according to the correct technical specifications.

### 2.4 Notice for Disposal

This product shall not be disposed of with household waste. They should be segregated and brought to an appropriate collection point to enable recycling and avoid potential impacts on the environment and human health.

Local rules in waste management shall be respected .

### 3.1 Intelligent LED Indicators

There are five indicators on the The Solis S6-EH1P(3-6)K-L Series Inverter (Battery, Power,

WiFi, Ethernet and Bluetooth) which indicate the working status of the inverter.

The Bluetooth Antenna or WiFi datalogger shall be installed at the Antenna/COM port of the hybrid inverter before local debugging.

		Light	Status	Description	
			Blue Flashing every 3s	Battery discharging.	
				Blue Flashing every 1.5s	Battery charging.
Solis		Battery	Blue Solid ON	ldle.	
			Yellow Solid ON	Battery Warning.	
			Blue Solid ON	Normally Operating.	
		© Power	Yellow Solid ON	Warning.	
	Battery		Red Solid ON	Alarm.	
	Power	((·	Blue Solid ON	COM Port is using.	
() (	WiFi	WiFi	OFF	COM Port is not used.	
<b>(</b>	RS485	•	Blue Solid ON	RS485 Port is using.	
*	Bluetooth	RS485	OFF	RS485 Port is not used.	
		*	Blue Solid ON	Bluetooth Port is using.	
		Bluetooth	OFF	Bluetooth Port is not used.	

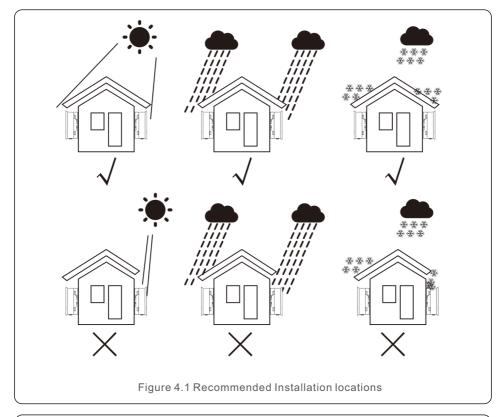

### NOTE:

Battery/WiFi/Ethernet/Bluetooth indicators will automatically turn off after 1 minute. The Power indicator will remain on with lower brightness. Short press the Power indicator can wake up all indicators.

### 4.1 Select a Location for the Inverter

To select a location for the inverter, the following criteria should be considered:

- Exposure to direct sunlight may cause output power derating. It is recommended to avoid installing the inverter in direct sunlight.
- It is recommended that the inverter is installed in a cooler ambient which doesn't exceed 104°F/40°C.

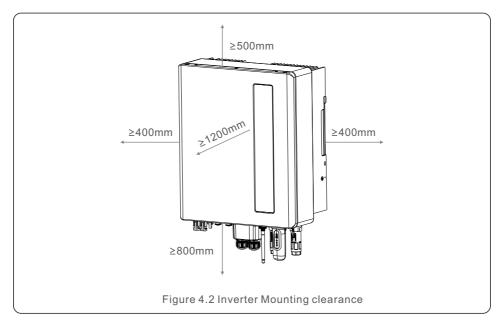

#### WARNING: Risk of fire

Despite careful construction, electrical devices can cause fires.

- Do not install the inverter in areas containing highly flammable materials or gases.
- Do not install the inverter in potentially explosive atmospheres.
- The mounting structure where the inverter is installed must be fireproof.

- Install on a wall or strong structure capable of bearing the weight of the machine (24.18kg).
- Install vertically with a maximum incline of +/- 5 degrees, exceeding this may cause output power derating.
- To avoid overheating, always make sure the flow of air around the inverter is not blocked. A minimum clearance of 400mm should be kept between inverters or objects and 800mm clearance between the bottom of the machine and the ground.

• Adequate ventilation must be provided.

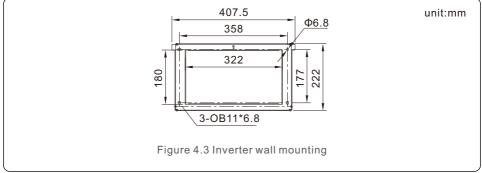

### NOTE:

Nothing should be stored on or placed against the inverter.

### 4.2 Mounting the Inverter

Dimensions of mounting bracket:

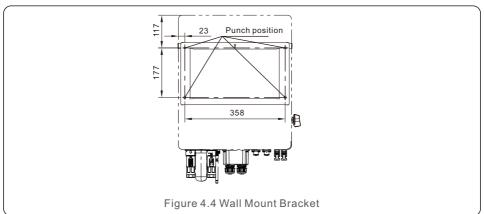

Once a suitable location has be found accordingly to 4.1 using figure 4.3 mount the wall bracket to the wall.

The inverter shall be mounted vertically.

The steps to mount the inverter are listed below:

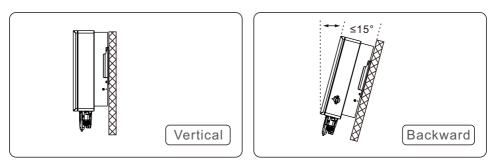

- Select the mounting height of the bracket and mark the mounting holes.
   For brick walls, the position of the holes should be suitable for the expansion bolts.
- 2.Lift up the inverter (be careful to avoid body strain), and align the back bracket on the inverter with the convex section of the mounting bracket. Hang the inverter on the mounting bracket and make sure the inverter is secure (see Figure 4.4)

#### WARNING:

The inverter must be mounted vertically.

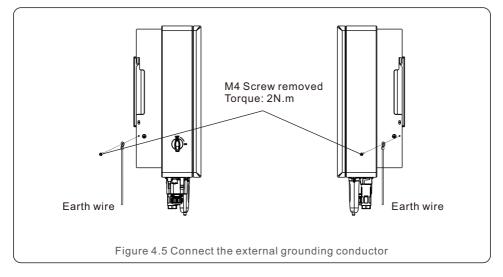

- Install vertically (+/-  $5^{\circ}$ ) or tilted backward ( $\leq 15^{\circ}$ ).
- Don't mount inverter on the tilted forward wall.
- Don't mount inverter on the horizontal.

### 4.3 PE Cable Installation

An external ground connection is provided at the right side of inverter.

Prepare OT terminals: M4. Use proper tooling to crimp the lug to the terminal.

Connect the OT terminal with ground cable to the right side of inverter. The torque is 2N.m.

### 4.4 PV Input Cable Installation

Before connecting inverter, please make sure the PV array open circuit voltage is within the limit of the inverter.

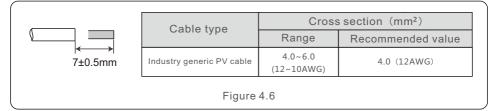

Before connection, please make sure the polarity of the output voltage of PV array matches the "DC+" and "DC-" symbols.

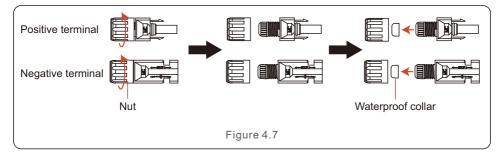

Please use approved DC cable for PV system.

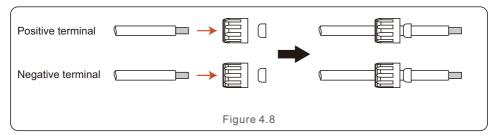

1. Select a suitable DC cable and strip the wires out by  $7\pm0.5$ mm. Please refer to the table below for specific specifications.

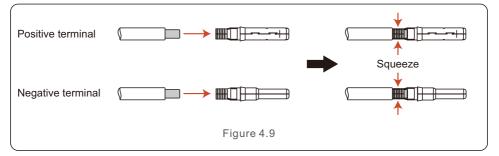

2. Take the DC terminal out of the accessory bag, turn the screw cap to disassemble it, and take out the waterproof rubber ring.

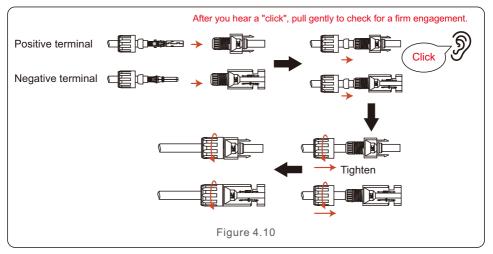

#### 3. Pass the stripped DC cable through the nut and waterproof rubber ring.

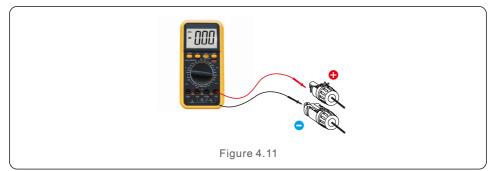

4. Connect the wire part of the DC cable to the metal DC terminal and crimp it with a special DC terminal crimping tool.

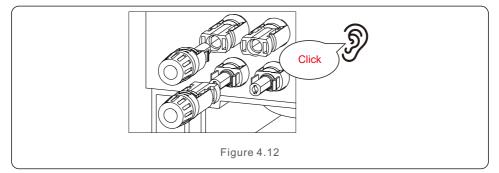

5. Insert the crimped DC cable into the DC terminal firmly, then insert the waterproof rubber ring into the DC terminal and tighten the nut.

6. Measure PV voltage of DC input with multimeter, verify DC input cable polarity.

7. Connect the wired DC terminal to the inverter as shown in the figure, and a slight "click" is heard to prove the connection is correct.

### CAUTION:

If DC inputs are accidently reversely connected or inverter is faulty or not working properly, it is NOT allowed to turn off the DC switch. Otherwise it may cause DC arc and damage the inverter or even lead to a fire disaster. The correct actions are:

\*Use a clip-on ammeter to measure the DC string current.

\*If it is above 0.5A, please wait for the solar irradiance reduces until the current decreases to below 0.5A.

\*Only after the current is below 0.5A, you are allowed to turn off the DC switches and disconnect the PV strings.

\* In order to completely eliminate the possibility of failure, please disconnect the PV strings after turning off the DC switch to aviod secondary failures due to continuous PV energy on the next day.

Please note that any damages due to wrong operations are not covered in the device warranty.

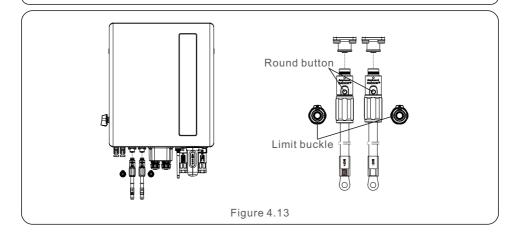

### 4.5 Battery Power Cable Installation

### NOTE:

1. The positive wiring (the angle of the limit tip is  $90^\circ$ ) is connected to the positive socket, and the negative wiring (the angle of the limit tip is  $180^\circ$ ) is connected to the negative socket;

2. When the terminal is inserted into the corresponding socket, you need to press the circular button on the terminal lightly and pay attention to the direction of the limit pin and the socket slot.

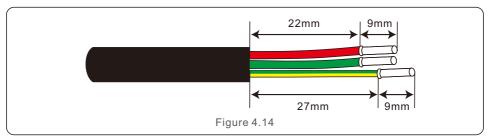

### 4.6 AC Cable Installation

There are two AC terminals and the assembly steps for both are the same.

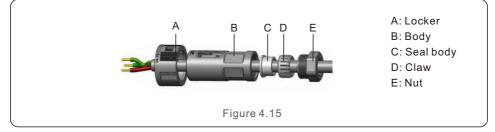

Take out the AC connector parts from the packaging.

Describe	Numerical value		
Cable diameter	10~14mm		
Traverse cross sectional area	6~8mm <sup>2</sup>		
Exposure Length	9mm		
Table 4.1			

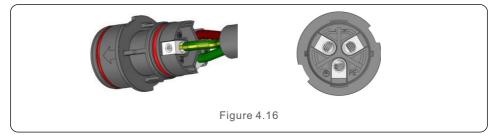

1. Disassemble the AC connector. Strip the AC wires about 9mm.

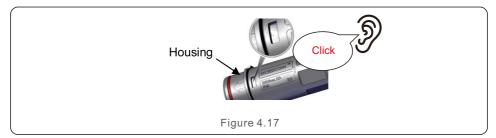

2. Set the parts on the cable.

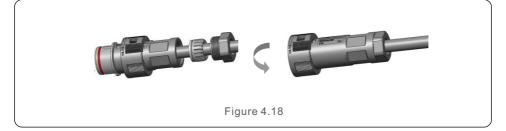

3. Crimp wires screw twisting torque 0.8+/-0.1N  $\cdot$  m.

4. Push Housing into Body.

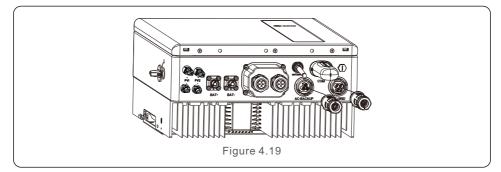

5. Insert Seal and Clamp Finger into socket ,then tighten the nut , torque 4+/-0.5N·m.

6. The same installation for both cable end plug and socket connectors.

7. Mating plug and socket: Push the plug into the socket completely, then rotate the locker according to the direction instructed by the marks on the locker.

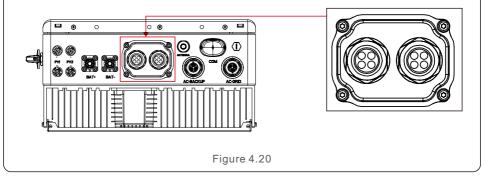

### NOTE:

Before mating the plug and socket, please double check both AC Grid and AC Backup connectors. Do not connect the grid cables to the AC Backup port or connect the backup load cables to the AC Grid Port. Otherwise, it may leads to malfunction or damage.

### 4.7 Communication Cable Installation

### 4.7.1 Protective Cover for Communication Ports

Inverter in the package is with a protective cover assembled to protect the communication ports.

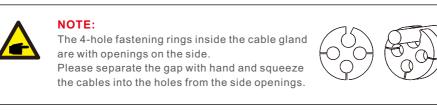

Step 1. Use Phillips screwdriver to take out the 4 screws on the cover.

Step 2. Read through the following sections of the manual and prepare the internet cables correspondingly.

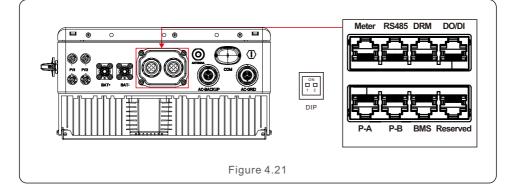

Step 3. Loose the cable gland and remove the watertight caps inside the cable gland based on the number of the cables and keep the unused holes with watertight cap. Step 4. Lead the cables into the holes in the cable gland. (Hole Diameter: 6mm) Step 5. Crimp the RJ45 connectors onto the cables according to the pin definitions described in the following sections and connect to the ports accordingly.

Step 6. Fasten the 4 screws on the cover (Torque: 1.7N.m-2 N.m)

Step 7. Reassemble the cable gland and ensure there is no bending or stretching of the internet cables inside the cover.

### 4.7.2 Communication Port Definition

Port	Function
BMS	Used for CAN communication between inverter and Lithium battery BMS.
Meter	Used for RS485 communication between inverter and the smart meter. It is necessary to realize the normal hybrid control logics.
DRM	(Optional)To realize Demand Response or Logic interface function, this function may be required in UK and Australia.
RS485	(Optional) Used for Modbus RTU communication with 3rd party external device or controller.
P-A/P-B	(Optional) Parallel operation communication ports (Reserved).
DO/DI	(Optional) Dry contact port (Reserved).
DIP Switch	When a single inverter is running, Pin1&Pin2 are placed in the OFF position, and when multiple inverters are paralleled, refer to the parallel manual for DIP switch settings.
	Table 4.3

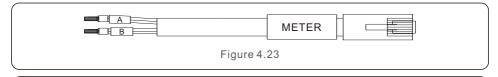

### 4.7.3 BMS Port Connection

Take out the pre-made CAN cable from the package and connect one end to battery CAN port and then connect another end to the inverter BMS port. Cable Length: 3 meters.

Figure 4.22
NOTE: Before connecting CAN cable with the battery, please check whether the communication pin sequence of the inverter and the battery match; If it does not match, you need to cut off the RJ45 connector at one end of the CAN cable and adjust the pin sequence according to the pin definitions of both inverter and battery. Pin definition of the inverter CAN Port is following EIA/TIA 568B. CAN-H on Pin 4: Blue CAN-L on Pin 5: Blue/White

### 4.7.4 Meter Port Connection

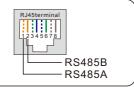

Take out the pre-made Meter cable from the package and connect RJ45 end to inverter Meter port and then connect another end with loose RS485 A & B pins to the meter RS485 terminal. Cable Length: 5 meters.

NOTE:

Pin definition of the Meter Port is following EIA/TIA 568B. RS485A on Pin 1:Orange/white RS485B on Pin 2:Orange

#### NOTE:

Compatible Smart Meter Pin definition. Eastron SDM630MCT – Pin 13 is RS485B & Pin 14 is RS485A. Eastron SDM630 – Pin B is RS485B & Pin A is RS485A.

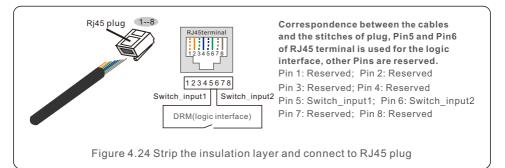

### 4.7.5 DRM Port Connection (Optional)

### 4.7.5.1 For Remote Shutdown Function

Solis inverters support remote shutdown function to remotely control the inverter to power on and off through logic signals.

The DRM port is provided with an RJ45 terminal and its Pin5 and Pin6 can be used for remote shutdown function.

Signal	Function
Short Pin5 and Pin6	Inverter Generates
Open Pin5 and Pin6	Inverter Shutdown in 5s
	le 4.2

### 4.7.5.2 For DRED Control Function (For AU and NZ Only)

DRED means demand response enable device. The AS/NZS 4777.2:2020 required inverter need to support demand response mode(DRM).

This function is for inverter that comply with AS/NZS 4777.2:2020 standard.

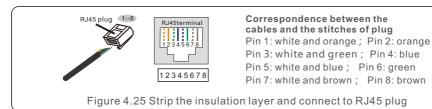

A RJ45 terminal is used for DRM connection.

ignment for inverters capable oth charging and discharging	le g Pir	Assignment for inverters capable of both charging and discharging	Pin
RefGen	5	DRM 1/5	1
Com/DRM0	6	DRM 2/6	2
V+	7	DRM 3/7	3
V-	8	DRM 4/8	4
	8 able 4.5		4

### NOTE:

Solis hybrid inverter is designed to provide 12V power for DRED.

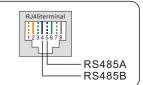

### 4.7.6 RS485 Port Connection (Optional)

If a 3rd party external device or controller needs to communicate with the inverter, the RS485 port can be used. Modbus RTU protocol is supported by Solis inverters. To acquire latest protocol document, please contact Solis local service team or Solis sales.

### NOTE:

Pin definition of the RS485 Port is following EIA/TIA 568B. RS485A on Pin 5: Blue/White RS485B on Pin 4: Blue

### 4.8 Meter Installation

#### **CAUTION:**

Make sure the AC cable is totally isolated from AC power before connecting the Smart Meter and CT.

A Smart Meter with the CT in product box is compulsory for hybrid system installation. It can be used to detect the grid voltages and current directions, provide the operating condition of the hybrid inverter via RS485 communications.

#### NOTE:

- 1. The Smart Meter with CT is already configured ; please do not change any settings on the Smart Meter.
- 2. One Smart Meter can be used with only one hybrid inverter.

The Solis S6-EH1P-L Series inverter is able to connected Acrel meters or Eastron meters to fuilfill the control logic of the self-consumption mode, export power control, monitoring, etc.

Eastron 1ph meter (With CT): SDM120CTM

Meter RS485 Pin Definition: Pin 9 - RS485B, Pin 10 - RS485A

Below 4.8.1 section describes the connection diagram of 1ph meter Eastron SDM120CTM.

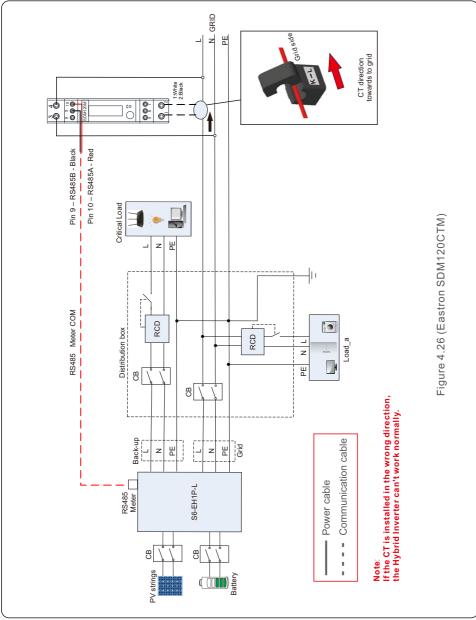

#### NOTE:

Please note that the CT orientation must be correct, otherwise the system will not work properly.

### 4.8.1 Single phase meter installation

### 4.9 Inverter Remote Monitoring Connection

The inverter can be remotely monitored via WiFi, LAN or 4G.

The USB type COM port at the bottom of the inverter can connect to different kinds of Solis data loggers to realize the remote monitoring on Soliscloud platform. To install Solis data loggers, please refer to corresponding user manuals of Solis data loggers.

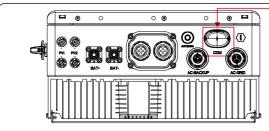

The Solis data loggers are optional and can be purchased separately.

Dust cover is provided the inverter package in case the port is not used.

### WARNING:

The USB type COM port is only allowed to connect Solis data loggers. It is forbidden to be used for other purposes.

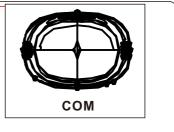

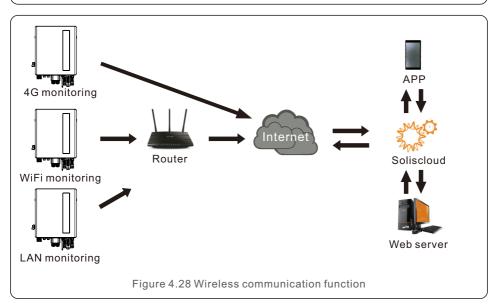

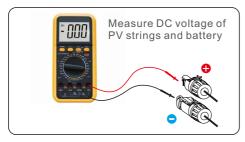

Figure 4.27

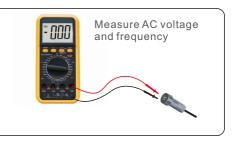

## 5. Commissioning

### 5.1 Preparation

- Ensure all the devices are accessible for operation, maintenance and service.
- Check and confirm that the inverter is firmly installed.
- Space for ventilation is sufficient for one inverter or multiple inverters.
- Nothing is left on the top of the inverter or battery module.
- Inverter and accessories are correctly connected.
- Cables are routed in safe place or protected against mechanical damage.
- Warning signs and labels are suitably affixed and durable.
- Bluetooth Antenna has been connected to the Antenna port of the inverter.
- An Android or IOS mobile phone with Bluetooth function is available.
- Measure DC voltage of PV strings and battery and ensure the polarity is correct.
- Measure AC voltage and frequency and ensure they are within local standard.

### 5.2 APP Download

Users need to download the APP before installing it for the first time. There are three ways to download and install the latest APP:

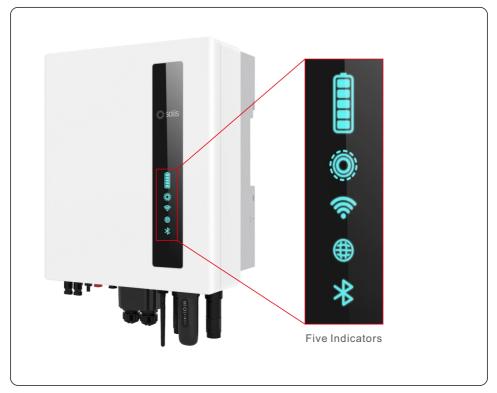

- 1. You can visit www.soliscloud.com to download the latest version APP.
- 2. You can search "**Soliscloud**" in Google Play or App Store.
- 3. You can scan this QR code below to download "Soliscloud".

## 6. Operation

### 6.1 Power On

This inverter can be powered on by PV only, battery only and Grid only. It is suggested that turn on the battery firstly, then set the parameters. After setting, turn on PV and GRID breakers to check whether the system runs properly.

When the inverter is powered on, the five indicators will be lighted at once.

### 6.2 Log in the APP via bluetooth

#### Step 1: Connect with Bluetooth.

Turn on Bluetooth switch on your mobile phone and then open the Soliscloud APP. Click "More Tools"->"Local Operation"->"Connect with Bluetooth"

	Register		Re	egister	<	Local Operation
Hello, Welcome to Solis	sCloud	Hello, Welcome to SolisCloud			Select	t Connection Method

## 6. Operation

### 6.3 Initial set up

After the log in for the first time, there is a setup wizard need to be finished.

Inverter Time -> Battery Model -> Meter Setting -> Grid Code -> Work mode

Step 4.1: Set the inverter Date and Time.

You can set to follow the time on your mobile phone.

< Q	uick Settir	ng Next
Battery Mode	Meter Setting	Grid Code
Inverter Date Setting		2022-08-11 >
Inverter Time Setting		15:27 >
Phone Time		2022-08-11 15:27:25
Follow Phone Time		

#### Step 4.2: Set the battery model.

It must be based on the battery model that is actually connected to the inverter. If there is no battery connected for the moment, please select "No Battery" to avoid alarms. For specific battery setting, please refer to the battery setting in the page 42.

<	Quick Setti	ng	Next
Battery M	Meter Setting	Grid Code	Work Mode

BYD HVL			
Jinko			

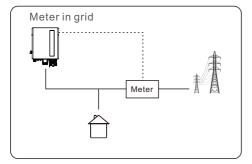

#### Step 4.3: Set the meter setting.

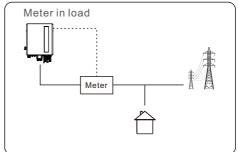

- Meter Type need to be set. It must be based on the meter type that is actually connected to the inverter.
- Meter Installation Location need to be set. It is suggested to install the meter at the system grid connection point and select "Meter in Grid"

If there is no meter connected for the moment, please select "No Meter" to avoid alarms.

Step 4.5: Set the work mode setting.

There are 4 work mode that can be set.

-Work mode1: Self-Use Mode (default)

- Work mode2: Feed in Priority Mode
- Work mode3: Backup Mode
- Work mode4: Off-grid Mode

#### Work mode1: Self-Use Mode (default)

Recommended setting is Self-Use Mode.

This mode can maximize the use of PV power generation for household electricity, or store it in batteries and use it for household electricity.

If need manually control the battery charging and discharging with respect to time, please use the Time of Use switch and the following set points.

The "Allow Grid Charging" is recommended to be turned on (If turned off, the inverter will not force charge the battery and battery could potentially go to sleep).

< Self-Use Mod	de
Self-Use Mode	
Time of Use Switch	
Time of Use Charge Current Set	10.0A >
Time of Use Discharge Current Set	10.0A >
Charge Time Slot 1	22:00 ~ 08:00 >
Discharge Time Slot 1	08:00 ~ 22:00 >
Charge Time Slot 2	00:00 ~ 00:00 >
Discharge Time Slot 2	00:00 ~ 00:00 >
Charge Time Slot 3	00:00 ~ 00:00 >
Discharge Time Slot 3	00:00 ~ 00:00 >
Allow Grid Charging	

#### Work mode2: Feed in Priority Mode

This mode can preferentially sends power to the grid when the load is met, used in areas where there is a subsidy for power to the grid.

If need manually control the battery charging and discharging with respect to time, please use the Time of Use switch and the following set points.

The "Allow Grid Charging" is recommended to be turned on (If turned off, the inverter will not force charge the battery and battery could potentially go to sleep).

< Feed in Priority Mode	
Feed in Priority Mode Switch	
Time of Use Switch	
Time of Use Charge Current Set	20.0A >
Time of Use Discharge Current Set	50.0A >
Charge Time Slot 1	08:00 ~ 18:00 >
Discharge Time Slot 1	19:00 ~ 08:00 >
Charge Time Slot 2	00:00 ~ 00:00 >
Discharge Time Slot 2	00:00 ~ 00:00 >
Charge Time Slot 3	00:00 ~ 00:00 >
Discharge Time Slot 3	00:00 ~ 00:00 >
Allow Grid Charging	

#### Work mode3: Backup Mode

This mode can coexist with Self-use or Feed in priority and is only suitable for lithium battery. In this mode, part of the battery capacity is reserved for the Backup load in case of power failure. The Backup SOC needs to be set to define the capacity to retain the battery .The "Allow Grid Charging" is recommended to be turned on.

< Backup Mode	
Backup Mode Switch	
Reserver SOC	80% >

#### Work mode4: Off-Grid Mode

This mode is only used for pure off-grid and is not recommended for normal storage systems. Note that if this mode is enabled in the grid-connected state, the working logic of the machine will be confused and the "Off-grid" will be displayed.

< Off-Grid Mode	
Off-grid Mode Switch	
Off-grid Overdischarge SOC	30% >

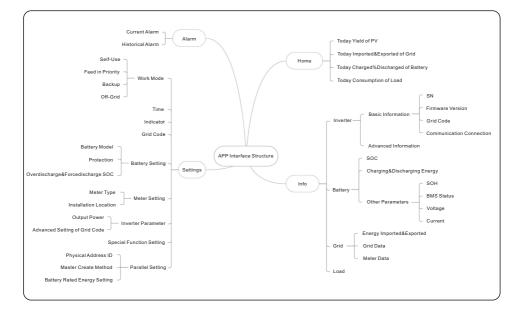

#### Step 5: Setup complete.

Now the initial settings on the inverter have been set and you can switch on the inverter DC switch and switch on battery breaker to start up the system. You can also explore in the APP to check the operating data, alarm message or other advanced settings.

#### App Interface Structure

The interface structure of APP is shown as follows.

Check system data, equipment information, and alarms on Overview and Parameters interfacce. Set system equipment parameters on Setting interface.

#### Energy flow diagram

The home page can display the working state, Today Yield of PV, Today Imported/ Exported of Grid, Today Charged/Discharged of battery and Today Consumption of household electricity.

#### Information

The Inverter page can display basic information such as historical yield, today PV input power, Inverter SN, rated power, model number, DSP/HMI firmware version, grid code and communication connection. The advanced information is authorized by the installer.

#### **Battery Setting**

Battery Model: select the battery model to be connected.

Battery Over-voltage/Under-voltage Protection: fill in the appropriate data to protect the battery and extend its life.

Over-discharge SOC: when the battery is discharged to the over-discharge SOC, the battery will not discharge actively. (Due to the internal current conduction, there is a small self-consumption power, if not charged for a long time, the SOC will slowly continue to decline.)

Force-charge SOC: due to the battery power consumption, when the over-discharge SOC drops to the force-charge SOC, the inverter will directly charge the battery according to the maximum battery charging current until the battery SOC reaches the over-discharge SOC. (The charging power is not limited to sources, which may be from PV or from the grid. If"Charging form grid" is set to "Not Allow", the charging logic may not be implemented.) It is not recommended to set the over-discharge&force-charge SOC to the same value, which may cause frequent charging and discharging.

<	Battery Setting	
Battery Model		Dyness LV >
Battery Overv Setting	oltage Protection	60.0V >
Battery Under Setting	voltage Protection	42.0V >
Forcecharge L Setting	imited Power	5000W >
Forcecharge F	Power Source Setting	Only Use >
Overdischarge	soc	20% >
Forcecharge S	SOC	10% >

#### Meter Setting

Meter type: please select a correct meter type. The wrong option will cause the meter RS485 communication Failed. If the battery and meter are not connected, you can select the "NO Meter" to shield the alarm of meter communication fault.

Meter Installation Location: Meter in Grid/Meter in Load/Grid +PV inverter.

Cancel	Meter Setting	Save
Meter Type	9	
Eastron Sta	andard 1P Meter	
Eastron Sta	andard 3P Meter	
NO Meter		~

#### **Backup Setting**

Backup Port Enabling Setting: please turn on it if the Backup port is needed.

#### Alarm

The Alarm page can display the Current Alarm(unsolved faults) and the Historical Alarm (resolved faults).

Solis-3115022B100041 Update:15:28:46	Solis-3115022B100041 Update:15:28:46	
Current Alarm Historical Alarm	Current Alarm Historical Alarm	
Alarm Message:	Alarm Message: GRID-INTF	
Alarm Code:	Alarm Code: 1030	
Alarm Grade:	Alarm Grade: Hint	
Resolution Method:	Alarm Time: 2022-12-21 16:27	
	Resolution Method: 1. Check whether the AC Connection is virtual. 2. Restart the inverter. 3. If it has not been eliminated, contact the factory's customer service.	

#### Changed password

When the password of the owner or the installer needs to be reset, please long press the states indicator for 5s.

If the reset command is successfully triggered, the status indicator will be blue and blink for 3s at the frequency of 0.5s, then restore the original state of the indicator.

If the command fails to be triggered, the status indicator will be yellow and blink for 3s at the frequency of 0.5s, then restore the original state of the indicator.

If the command is successfully triggered, the Bluetooth password can be reset in the APP.

### 6. Operation

### 6.4 Shutdown procedure

Step 1. Turn off the AC circuit breaker at the grid-connection point.

Step 2. Turn off the DC switch of the inverter.

Step 3. Turn off the battery circuit breaker.

Step 4. Wait until the device is powered off and the system is shut down.

Solis S6 Series inverter does not require any regular maintenance. However, cleaning the heatsink will help the inverter dissipate heat and increase the lifetime of inverter. The dirt on the inverter can be cleaned with a soft brush.

#### CAUTION:

Do not touch the surface when the inverter is operating. Some parts may be hot and could cause burns. Turn OFF the inverter and let it cool down before you do any maintenance or cleaning of inverter.

The Screen and the LED status indicator lights can be cleaned with cloth if they are too dirty to be read.

#### Note:

Never use any solvents, abrasives, or corrosive materials to clean the inverter.

### 7.1 Smart O&M

In order to improve our products and provide you with higher quality services, this device has a built-in data logging module for collecting relevant information during operation (such as power generation data, fault data)

#### Commitment:

- 1. We will only collect, use and process your device information for the purpose of improving our products and services.
- 2. We will take all reasonable and feasible measures to ensure that no irrelevant information is collected and we will protect your device information.
- 3. We will not share, transfer or disclose the collected device information with any company, organization or individual.
- 4. When we stop operating products or services, we will stop collecting your device information in a timely manner.
- 5. If you do not want to provide such information, you can notify our company to turn off this function, which will not affect your normal use of other functions of the product.

### 8. Troubleshooting

Message Name	Information Description	Troubleshooting Suggestion
Off	Control device to shutdown	1. Turn on the device in the ON/OFF Setting.
LmtByEPM	The device's output is under controlled	<ol> <li>Confirm whether the inverter is connected to an external EPM/meter to prevent reverse current.</li> <li>Confirm whether the inverter is controlled by an external third-party device.</li> <li>Confirm whether the power setting of the inverter power control is limited.</li> <li>Verify settings in section 6.6.7 and check your meter readings.</li> </ol>
LmtByDRM	DRM Function ON	1. No need to deal with it.
LmtByTemp	Over temperature power limited	1. No need to deal with it, the device is in
LmtByFreq	Frequency power limited	normal operation.
LmtByVg	The device is in the Volt-Watt mode	<ol> <li>Due to the requirements of local safety regulations, when the grid voltage is high, the Volt-watt working mode is triggered, which generally does not need to be dealt with.</li> <li>Inverter factory test errors causing this mode to open, if you need to close, you can close this mode in LCD, set the process: Main menu → Advanced Settings → Password 0010 → STD mode settings → Working Mode → Working mode: NULL → Save and exit.</li> </ol>
LmtByVar	The device is in the Volt-Var mode of operation	<ol> <li>Due to the requirements of local safety regulations, when the grid voltage is high, the Volt-watt working mode is triggered, which generally does not need to be dealt with.</li> <li>Inverter factory test errors causing this mode to open, if you need to close, you can close this mode in LCD, set the process: Main menu → Advanced Settings → Password 0010 → STD mode settings → Working Mode → Working mode: NULL → Save and exit.</li> </ol>
LmtByUnFr	Under frequency limit	
Standby	Bypass run	1. No pood to dool with it
StandbySynoch	Off grid status to On grid status	1. No need to deal with it.
GridToLoad	Grid to load

#### Table 8.1 Fault message and description

#### NOTE:

If the inverter displays any alarm message as listed in Table 8.1; please turn off the inverter and wait for 5 minutes before restarting it .

If the failure persists, please contact your local distributor or the service center.

Please keep ready with you the following information before contacting us.

- 1. Serial number of Solis Singles Phase Inverter;
- 2. The distributor/dealer of Solis Singles Phase Inverter (if available);
- 3. Installation date.

4. The description of the problem together with necessary information, pictures, attachment.

- 5. The PV array configuration (e.g. number of panels, capacity of panels, number of strings, etc.);
- 6. Your contact details.

Max. input current 40 A	Input AC (Grid side)		
	Input voltage range	187-253V	
Frequency range 45-55 Hz/ 55-65Hz	Max. input current	40 A	
	Frequency range	45-55 Hz/ 55-65Hz	

Technical Data	S6-EH1P6K-L-EU	
Output AC(Grid side)		
Rated output power	6kW	
Max. apparent output power	6.6kVA	
Operation phase	1/N/PE	
Rated grid voltage	220 V/230 V	
The grid voltage range	187-253 V	
Rated grid frequency	50 Hz/60 Hz	
AC grid frequency range	45-55 Hz/55-65 Hz	
Rated grid output current	27.3 A/26.1 A	
Max. output current	30.0 A	
Power Factor	>0.99 (0.8 leading - 0.8 lagging)	
THDi	<2%	
Efficiency		
Max efficiency	>97.5%	
EU efficiency	>96.2%	
BAT charged by PV Max. efficiency	>94.9%	
BAT charged/discharged to AC Max. efficiency	>94.33%/93.51%	
Protection		
Ground fault monitoring	Yes	
Residual current mornitoring	Yes	
Integrated AFCI	Yes	
DC reverse polarity protection	Yes	
Protection class / Over voltage category	1 / 11	

Technical Data	S6-EH1P6K-L-EU	
General data		
Dimensions(W/H/D)	405*480*205mm	
Weight	24.18kg	
Topology	High frequency insolation (for battery)	
Operation temperature range	-25℃ ~ +60℃	
Ingress protection	IP66	
Cooling concept	Natural convection	
Max.operation altitude	4000m	
Grid connection standard	G98 or G99, VDE-AR-N 4105 / VDE V 0124, EN 50549-1, VDE 0126 / UTE C 15 / VFR:2019, RD 1699 / RD 244 / UNE 206006 / UNE 206007-1, CEI 0-21, C10/11, NRS 097-2-1, TOR, EIFS 2018.2, IEC 62116, IEC 61727, IEC 60068, IEC 61683, EN 50530, MEA, PEA	
Safty/EMC standard	IEC/EN 62109-1/-2, EN 61000-6-1/-2/-3/-4	
Features		
DC connection	MC4 connector	
AC connection	Quick connection plug	
Display	LED+APP	
Communication	RS485,CAN, Optional: Wi-Fi, GPRS, LAN*	
Warranty	5 years standard (extand to 20 years)	

\*WIFI/GPRS communication function needs to use the data logger, LAN communication needs to cooperate with the upper PC.

Bluetooth

Frequency range:2400-2483.5MHz

WiFi maximum transmitting power:4dBm

Ginlong Technologies Co., Ltd. No. 57 Jintong Road, Binhai Industrial Park, Xiangshan, Ningbo, Zhejiang, 315712, P.R.China. Tel: +86 (0)574 6578 1806 Fax: +86 (0)574 6578 1606 Email:info@ginlong.com Web:www.ginlong.com

Please adhere to the actual products in case of any discrepancies in this user manual. If you encounter any problem on the inverter, please find out the inverter S/N and contact us, we will try to respond to your question ASAP.

Comply with CA Rule 21/ Certified to UL 1741 SA Certified to UL Std. No. 1741-Second Edition & CSA-C22.2 No.107.1-16
